

Patented Clamping Reliability

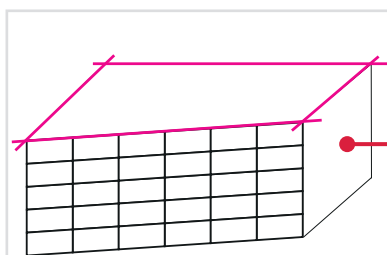

Included the twist system, the laying clamp adapts to uneven stone layers when clamping the stones.

The stone layer is precisely grabbed parallel on each side, even if both sides are warped and not vertically even.

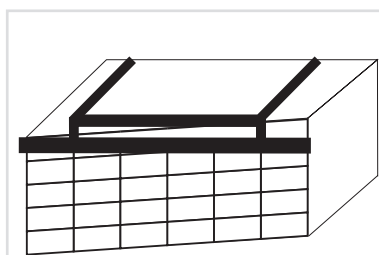

Best gripping safety and laying performance is the result.

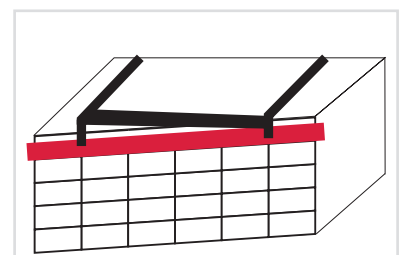

- ✓ Safe gripping of twisted stone layers
- ✓ Clamps extra wide or very thin stone layers perfectly
- ✓ twist-system works fully automated

Twisted Stone Layers
caused by uneven grounds

Without twist System
problems occur whilst
trying to move twisted
stone layers

With twist System
safe clamping and laying of
every stone layer
